

Jeg har ikke prioriteret en decideret GUI til min applikation, men man kan kalde API'et via en REST ressource, via URL'en eller POSTMAN, og få svaret vist i JSON:

- How many Twitter users are in our database?

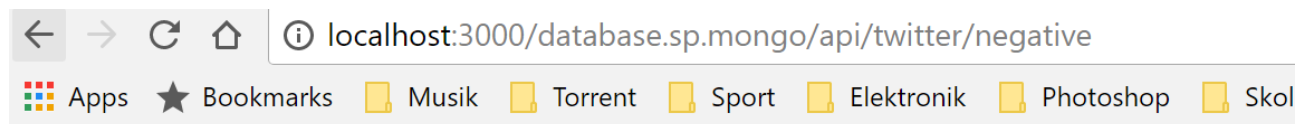

All User count = 659178

- Who are the most active Twitter users (top ten)?

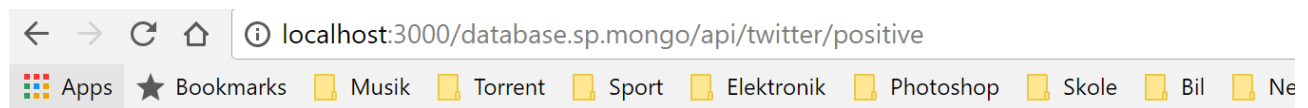

Who are the five most grumpy

Most negative users = ["lost_dog", "tweetpet", "webwoke", "mcraddictal", "wowlew"]

The five most happy:

Most Positive users =["cathriiin", "puchal_ek", "TheWDBboards", "bpbabe", "AmandaMarie1028"]
